## UP Manila Chancellor, PGH Director spearhead inauguration of PGH new iPICU and P-PDU Units

**By: Juliet Sio - Aguilar, M.D., M.Sc.**  
**Professor & Chair**  
**Department of Pediatrics**

UP — Manila Chancellor, Dr. Carmencita D. Padilla and PGH Director, Dr. Gerardo D. Legaspi led the inauguration of the new Intermediate Pediatric Intensive Care and Pediatric Peritoneal Dialysis Units on December 17, 2018 at the Pediatrics Departmental Complex of PGH. The momentous event was also attended by Dr. Juliet Sio - Aguilar, Chair of the Department of Pediatrics. The iPICU and P-PDU facilities were donated by Sytengco Group of Companies (SBS Philippines Corporation) thru Mr. Necisto Y. Sytengco II and facilitated by PGH Medical Foundation, Inc.

A 7-bed unit, with two isolation rooms, the iPICU is fully equipped to provide optimal medical and nursing services to critically ill patients, who, otherwise, have been managed in the pediatric wards due to the limited bed capacity in the main Pediatric Intensive Care Unit. The P-PDU, on the other hand, will accommodate Pediatric Patients with chronic kidney disease in dire need of Peritoneal Dialysis while awaiting kidney transplant. Patients with end – stage kidney disease can now get their much needed dialysis and be taught how to do dialysis at home.

The construction of the twin facilities serves as confirmation with painstaking efforts, commitment, and team work of the PGH Medical Foundation, Inc., and the Department of Pediatrics towards the realization of the PGH noble vision of service to the Filipino children.

## Rotary Club donates Pasteurizer for PGH Human Milk Bank

**By: Dr. Catherine May S. Dimacali**  
**Lactation Unit & UP - PGH Milk Bank Center**  
**Department of Pediatrics**

The grant, dubbed as “*Gatas Mo, Buhay Ko – Alay ng Rotary*”, is intended to strengthen and expand the operations of PGH Human Milk Bank facility. The project is an example by which Rotarians fulfill one of their areas of focus: Maternal and Child Health.

The pasteurizer was donated through Rotary International Global Grant No. 1864132, made possible through the collaboration of Ms. Carol Siy, President of the Rotary Club of Makati Jose P. Rizal; Mr. Lee Kyung Hwan and Mr. Lee Kye Seok, President of the Rotary Club of New Daechon, Korea; Mr. Frederick Siy, President of the Bryan Big Hearted Foundation, Inc.; and Dr. Gregorio Alvior, Jr., Chair of the PGH Medical Foundation, Inc. The event was well-represented, with the Rotarians being joined by Dr. Aurora Gloria Libadia and Dr. Fay De Ocampo from the Human Milk Bank and Lactation Unit; Dr. Alfonso A. Doloroso - Former Vice President, Mrs. Dalisay Z. Nodque - Secretary, Mr. Nicodemus A. Ang and Ms. Erlinda B. Cambia – Execom Officers of the PGH Medical Foundation Inc., PGH Director Dr. Gerardo Legaspi; Dr. Juliet Sio-Aguilar and Dr. Resti Ma. Bautista from the Department of Pediatrics and the Section of Newborn Medicine; Dr. Stella Marie Jose from the Department of Obstetrics and Gynecology; Ms. Fe Basinag and Ms. Robina Madrigal, Chief Nurses of the Neonatal Intensive Care Unit and the OB Admitting Section; the Newborn Medicine fellows; and the UP Med Choir, the University's chorale group who led the invocation.

## MESSAGES

Mabuhay!

2018 was indeed a very good year for the PGH MFI. We had very successful fund raising events like our Art Auction and our Golf Tournament. We have also expanded the coinbank program. We have received corporate donations that allowed us to finish various projects of the PGH, like the

Pediatric Intermediate Care Unit, the Pediatric Peritoneal Dialysis Unit, the Human Milk Bank and many other smaller projects. One of our most successful projects was the Hygiene Kits we give to each and every admitted PGH patient.

The Foundation wishes to expand the assistance to the PGH patients further but to be able to do this, we need to improve our fund raising activities, corporate and individual solicitations, and rely on the spirit of volunteerism.

The Foundation will have a Strategic Planning Workshop on March 14 & 15, 2019 to map out our future direction. We are tempered by our desire to give more help to more people and our concern for the continuing survival of the Foundation.

2019 Should be a better year. More thanks to our very generous sponsors.

*Dr. Telesforo E. Gana, Jr.*  
President

## THE WIND BENEATH OUR WINGS

I am truly very humbled to be given the opportunity to serve as the Vice President of the PGH Medical Foundation (PGHMFI). I take on this role with a grateful heart knowing that I will be able to help our poor brothers and sisters who are in dire need. All of this for my love to God and for His greater glory.

As we start 2019, we will continue to pursue to get more members to help us in our charitable cause. We have also started reaching out to the corporate community to look for more donors to help us raise needed funds to service the needs of the charity patients of the Philippine General Hospital (PGH).

I am very confident that with our planned activities for 2019, including the expansion of the coin bank program and PGHMFI Golf Tournament to name a few, we will be able to help more patients at the PGH.

I would also like to take this opportunity to express my sincerest gratitude to the Board of Directors, Executive Committee Officers, and Members of PGHMFI who have entrusted this task to me. You have my assurance that I will continue to work harder to ensure that we are able to deliver our promise to the charity patients of PGH. Thank you also to all the staff of PGHMFI for their unwavering passion and support to the PGHMFI.

*Atty. Arnaldo M. Cariño*  
Vice - President

## Peritoneal Dialysis for Children: A Dream Come True for PGH

*In the photo (L-R) Mr. Necisto Y. Sytengco II, Dr. Carmencita D. Padilla, Dr. Gerardo D. Legaspi, Dr. Juliet Sio - Aguilar, Ms. Sabrina Poon, and Dr. Dolores D. Bonzon.*

**By Dr. Dolores D. Bonzon**  
Chief, Section of Nephrology  
Department of Pediatrics

Kidney failure can affect children of all races and age groups from infants to adolescents and can have a significant effect on a child's growth, development, and quality of life. Worldwide, the incidence of end-stage renal disease in children is increasing. In the US, approximately 1,300 children are likely to develop permanent kidney failure or End-Stage Renal Disease (ESRD) every year. The main causes of kidney failure in children are birth defects of the kidney, blockage or reflux of the urinary tract, genetic kidney diseases, and Focal Segmental Glomerulosclerosis (FSGS). The incidence of end-stage renal disease in the Philippines is at 120 per million populations for both adult and pediatric patients and the most common causes of End-

Stage Renal Disease (ESRD) among Filipinos are diabetes, hypertension and chronic glomerulonephritis.

When a child develops ESRD, he or she must receive Renal Replacement Therapy (RRT). RRT replaces the work the kidneys do for the body, removing excess fluid, waste removal, and regulation of electrolytes. There are two main types of RRT for ESRD, dialysis and a kidney transplant. A kidney transplant is usually the best treatment because it is the closest thing to having normal kidneys, but sometimes it is not possible for a kidney transplant to happen right away. Therefore dialysis is often necessary before getting a transplant. There are two types of dialysis treatment available, either Hemodialysis (HD) or Peritoneal Dialysis (PD).

HD is when blood is taken out of the body through a tube and cleaned by an artificial kidney filter that is attached to a dialysis machine then returned to the body. Children undergoing hemodialysis have to receive dialysis treatment at a hospital or dialysis center. Treatments last about 3-4 hours, 3-4 times every week.

PD is performed by surgically placing a special, soft, hollow tube into the child's lower abdomen near the navel. After the tube is placed, a special solution called dialysate is instilled into the peritoneal cavity. The peritoneal cavity is the space in the abdomen that houses the organs and is lined by two special membrane layers called the peritoneum. The dialysate is left in the abdomen for a designated period of time that is determined by the child's nephrologist. The dialysate fluid absorbs the waste products and toxins through the peritoneum. The fluid is then drained from the abdomen, measured, and discarded. The tube is repeatedly filled with the dialysate and drained several times a day to complete the cleaning process. A child will be hospitalized for a few days when starting PD to make sure the tube and treatment are working properly. There are two different types of peritoneal dialysis: Continuous Ambulatory Peritoneal Dialysis (CAPD) and Continuous Cyclic Peritoneal Dialysis (CCPD).

CPD is the most common dialysis treatment modality used to treat pediatric patients with ESRD, particularly, HD in children less than five years of age.

CPD offers several advantages over HD that are beneficial for children. PD has fewer side effects than hemodialysis because it is a more gentle type of treatment done every day as opposed to hemodialysis, which is a relatively quick treatment done over short amount of time. Children on PD are less likely to experience headaches, dizziness, nausea, and fatigue, which can occur during and after hemodialysis treatments. PD also tends to be better for young children and infants, who may not be able to tolerate hemodialysis due to their small size. All children on dialysis have to follow a special kidney diet, but the diet is less strict with PD compared to hemodialysis. PD allows fluid, electrolytes, and waste to be removed daily, so those on PD do not have to restrict their fluid or protein intake as much.

## Rotary Club Donates.....

*This photo was taken on April 30, 2018 during the turn over ceremony of Human Milk Pasteurizer donated by Rotary Club Daechon, Mr. Lee Kyoung Hwan, Rotary Club of Makati Jose P. Rizal and Ms. Caroline Siy to the PGH Department of Pediatrics through the effort of PGH Medical Foundation, Inc.*

PGH strongly adheres to Executive Order No. 51 (The Milk Code) as well as Republic Act No. 7600 (The Rooming-In and Breastfeeding Act of 1992).

Breastfeeding is promoted and protected, and the provision of human milk is made a priority as the unequalled source of immune protection and nutrition for sick premature and full-term newborns even if they are separated from their mothers.

The new pasteurizer is a big step towards improving the efficiency of the operations of the Human Milk Bank. It is expected to help sustain the needs not only of the infants delivered at the PGH OBAS-NICU complex which amounts to around 7,000 live births each year, but also to those delivered outborn, as well as victims of national emergencies, such as of Typhoon Haiyan (Yolanda) and the Marawi crisis.

*Mother and Child share joy in breastfeeding*

From Page 3....

## Peritoneal Dialysis...

PD treatments can be done at home, which is a major advantage over hemodialysis. It can also be done at nighttime while a child is sleeping. This allows children on PD to go to school regularly and do more normal activities during the day. It can also accommodate parents who work during the day. Children on PD can swim and play most sports as long as the tube is taped properly and carefully protected. Although it is not a cure, a kidney transplant is the best form of renal replacement therapy and the closest thing to having normal kidneys. However, when a kidney transplant is not possible right away, PD is a good option and offers several advantages over hemodialysis, including better school attendance and normal social interaction for the child, more flexibility of treatments, and fewer side effects. A child's kidney doctor (nephrologist) can provide more information about the different types of renal replacement therapy and will recommend the best treatment for an individual child with ESRD.

The Pediatric Peritoneal Dialysis Unit of the Philippine General Hospital (PGH) was inaugurated last December 2018. It is the first dedicated Peritoneal Dialysis Unit for pediatric patients in the country. This is a dream come true that was made possible through the generous donation of SBS Philippines Corporation which was coursed through the PGH Medical Foundation, Inc. It is expected to serve as many as 20 to 30 patients a day.

## From Wish List to Reality

**By: Dr. Anna Elvira Arcellana**  
Assistant Chief Resident for Services  
Department of Medicine

than two grueling months spent in the hospital, the resources of Maria's family were exhausted, making it very difficult for them to procure home needs. It was the PGH Medical Foundation that enabled Maria to pursue the roadmap to home. With the funding from this charitable institution, her family was able to purchase needs for the care of a patient with respiratory failure at home- an oxygen tank, suction machine and tubings, and an eggcrate mattress. Though Maria is debilitated by a chronic illness, the future is not ultimately bleak- recovery may be slow but, is indeed, a worthwhile pursuit, and this oxygen support at home equated to a renewed life with her family.

Maria is not a lone patient who was given a ray of hope by generous souls who share in the cause of the PGH Medical Foundation. For the past fifteen years, the PGHMF has given thousands of patients another shot at life in so many ways. For some patients, the PGHMF already reached out a helping hand even as they were just starting the battle against their disease. The Section of Hematology of the Department of Medicine has so many patients in need of bone marrow and molecular studies for the diagnosis of their illness. In this age of targeted therapy, obtaining the definitive diagnosis of the disease is the first step in pursuing treatment. Through the help of the PGHMF, in partnership with other agencies, these patients benefit from bone marrow and molecular studies, which are critical in giving them a chance at cure.

Even for patients who seem very debilitated with their chronic diseases, wheelchairs provided by funds from the Foundation have enabled them to move away from the confines of their bed and experience the world again. Indeed, the PGHMF is a generous ally of patients in all stages of their disease- from diagnosis to treatment, to long-term care and rehabilitation.

On its 15<sup>th</sup> year anniversary, the PGHMF, together with its growing pool of donors and generous supporters of the cause, celebrate their unfading commitment to the underserved, living by the institution's mantra, "*giving hope to those who have none.*" Growing stronger through time, not even the most aggressive illnesses has stopped this remarkable foundation from enabling struggling patients to live their humble dreams.

All set for home. All Maria needed was an oxygen tank to aid her in breathing while her weak lungs recovered. With more

## PGH MFI hygiene kits for indigent patients

The PGH Medical Foundation, Inc., launched a hospital wide distribution of hygiene kits to all the indigent patients of the Philippine General Hospital (PGH) with the primary objective of providing them with quality healthcare. This project is under the program of PGH Charity Patients Medical Fund. A monthly distribution of hygiene kits was undertaken from June 5, 2018 to December 28, 2018. A total of 2,852 in - patients benefited from this activity. The distribution of the hygiene kits is broken down as follows:

DEPARTMENT / WARD	JUNE	JULY	AUG.	SEPT.	OCT.	NOV.	DEC.	TOTAL
Medicine								
Ward 1	76	48	31	20	65	52	51	343

## PGH MFI Century Club: Unwavering Support Elevates Goal Achievement of the Foundation

For the past three years since its creation in 2015, the growing number of members of the PGH MFI Century Club led by both Dr. Gregorio T. Mariano, Jr. (US - Based) and Dr. Gregorio T. Alvior, Jr. (Local - based), continues. However, the pioneers of this organization diligently exert more efforts in encouraging other people to join the club considering the increasing demand of the number of charity patients seeking medical assistance through the purchase of medicines and special laboratory tests which are not available in the hospital but can be readily access outside the PGH.

The unwavering support from the members and their friends ensure that the purpose of the organization is carried – out relentlessly for the benefit of indigent patients of PGH.

***We enjoin the UP Manila and  
PGH Communities to be part of  
PGH MFI Century Club.***
